

X microwave

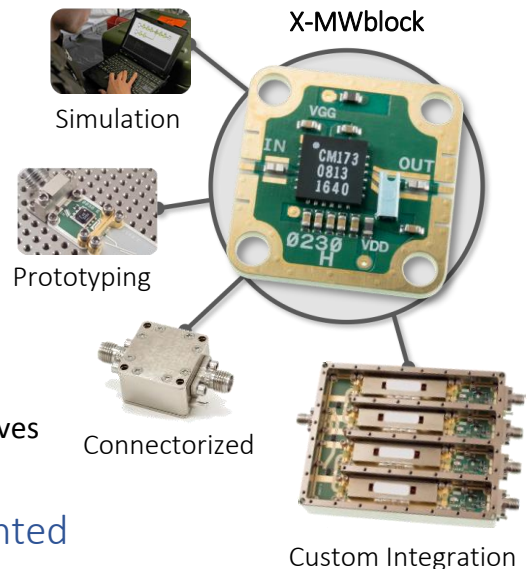

Corporate Overview

Founded October 2013 by John Richardson and Ray Page with the simple **Vision** to Make RF and Microwave Product Development Faster, Easier and Lower Cost

Modular System of Drop-in Components allows RF engineers to rapidly design, prototype and produce high performance assemblies such as wireless communications, radar, and spectrum monitoring systems

Often compared to LEGO® blocks or an ERECTOR® set

Available globally through direct sales or local Representatives

RF and Microwave Hardware Design, Re-Invented

From the back of a napkin to deployable systems in weeks, breadboarding RF and Microwave circuits is now a reality (DC - 60 GHz). Recent innovations in drop-in component technologies allow high performance RF & Microwave circuits to be prototyped quickly for immediate use in the field with an accelerated path to volume RF production. RF engineers are tackling challenges from product design to production test in record time, at a fraction of the cost.
